

PROTEO

HAULIERENTERPRISE

What it is:

HaulierEnterprise is a proven enterprise software system that maximises revenue for operators of mid to large-size general haulage fleets by capturing and recouping all rechargeable operational costs. It's highly flexible and provides the most capable automated, all-in-one system yet for this increasingly sophisticated business sector, spanning everything from initial revenue generation to receipt of payment. It can also be integrated with vehicle GPS-tracking.

An **enterprise software system** is an application that automates all of an organisation's workflow processes, optimising their performance and efficiency whilst providing management with clear, concise information for the purposes of planning, operations management and reporting.

How it works

Order Entry

- via staff, client portal, or imported from other systems

Load-Building and Planning

- collection/delivery run creation resource
- management and allocation
- sub-contract

Deliver

- capture debrief
- arrival/departure times
- pallets in and out
- (PCVs)
- refused goods

Document Scanning

- scan/upload POD and other documents
- auto-email documents to clients
- available for clients via portal

Invoice

- pre-invoice checks, including POD received, reference numbers, rate and extras
- invoice produced from HaulageEnterprise
- posted to your accounts package

Reporting

- revenue and delivery reports
- KPIs
- GPS-based reports
- customisation

Features and Benefits:

Provides automated end-to-end synchronisation of all aspects of the haulage business operation, without the need for other electronic or paper-based systems

Suitable for all business types, including contract logistics, pallet networks, distribution, full loads and groupage. (You have the option to cascade orders down any route, optimising your cost and revenue)

Allows better and easier forward-planning and visibility of incoming and outgoing vehicles between traffic areas – providing the necessary support tools for extensive decision-making, based upon information stored all in one place yet accessible across different operating sites

Allows direct access to your system by customers – for order-entering, POD access and generally sharing information – and integration with their own order systems, saving you valuable back-office admin time whilst offering a more responsive service

PROTEO

HAULIERENTERPRISE

Achieves significantly improved cash-flow through cleverer financial work-flow, integrating with existing accounting systems to ensure that your invoices are accurate and promptly sent to the client

Helps with expansion into international markets – multi-currency support tracks exchange rates and allows more effective working with other currencies and overseas sub-contractors

Can be fully integrated with Proteo's FleetMetrik vehicle telematics technology to provide a unique, customisable, all-in-one fleet-management solution.

What situations it's right for:

- Mid to large-size commercial LGV haulage fleet operators (the bigger the fleet, the greater the potential savings and benefits)
- Haulage businesses involved primarily (but not exclusively) in the transport of palletised goods
- Haulage companies wanting to bring all of their operational control activities together into one transparent, automated, paperless system which can be accessed by all authorised users and customised to meet exact requirements
- LGV fleet operators wanting to easily recover even the smallest rechargeable on-costs through investment in smart, flexible technology
- Sizeable hauliers wishing to co-ordinate, control and monitor their business operations in exactly the way that they need in order to maximise profits.

Haulier Enterprise...

.. provides everything other packages offer, plus many additional and improved features – and fully integrates with Proteo's market-leading FleetMetrik driver-performance, fuel-saving and GPS-tracking system.

.. is all about using proven smart technology to give

managers more efficient, customisable control of their haulage operations and administration, automating processes, recovering on-costs, saving valuable time, having everything you need in the same place so that you can run your business better and more profitably.

.. is designed from the ground up, by Proteo, to meet the particular demands of the modern haulage business – today and in the future – operating as an integrated part of a modern supply chain.

Save time, boost margins and find new ways to transform and grow your business with HaulierEnterprise!

Other LGV/PSV fleet-operator products to consider:

FleetMetrik – is the market-leading vehicle telematics and GPS-tracking device that's installed in LGV/PSV fleets to transmit vehicle and driver-performance information back to the office-based fleet manager. FleetMetrik can be seamlessly integrated into HaulierEnterprise to provide ultimate control of your haulage business.

DriverWorkFlow – optimises driver-based mobile working situations in busy organisations, connecting drivers and other non-office-based workers with the central-office ERP/CRM, so that they are fully integrated into one, efficient workflow management system. Combines with the Proteo ToughTouch hand-held or in-cab port to provide the market-leading solution to mobile-worker communications.
